PROFESSIONAL SUMMARY

Backend Software Engineer with 3+ years of experience designing, building, and scaling systems used by real businesses, working with PHP/Laravel and Node.js (NestJS, Express). Founded and shipped a restaurant management SaaS platform now serving paying clients, and delivered backend improvements across booking, education, and ISP platforms. Reduced database load by 60% and cut API response times below 200ms through Redis caching and query optimization. Skilled in multi-tenant SaaS architecture, RESTful API design, role-based access control (RBAC), and modernizing legacy systems, with a consistent record of shipping reliable, production-grade features in agile teams.

TECHNICAL SKILLS

Backend: PHP 8+, Laravel 10+, Node.js, NestJS, Express.js, RESTful API Design, OOP, SOLID Principles, MVC, API Documentation

Architecture: SaaS, Multi-Tenant Systems, RBAC, Redis Caching, Queue Systems, AWS S3-Compatible Storage

Databases: MySQL, PostgreSQL, Database Design & Migrations, Query Optimization, Performance Tuning

Practices: TDD, Automated Testing (PHPUnit), Code Review, CI/CD (GitHub Actions), Agile/Scrum, Git, Jira

Frontend: JavaScript, Tailwind CSS, HTML, CSS

Languages: Arabic (Native), English (Professional Working Proficiency)

PROFESSIONAL EXPERIENCE

Backend Software Engineer
Oct 2023 – Present

Approved Tech — *Kuwait*

- Built and maintained backend systems for SaaS, ERP, and booking platforms across PHP/Laravel and Node.js (NestJS, Express) services, supporting multiple enterprise clients in production.
- Reduced response times and infrastructure costs by improving the performance and reliability of high-traffic systems.
- Designed and implemented role-based access control (RBAC) systems, securing client data across distinct user types and permission levels.
- Collaborated in agile sprints using Jira for task and sprint tracking, reviewed teammates' code, and wrote automated tests that caught issues before reaching production.
- Maintained CI/CD pipelines that kept releases fast, stable, and consistently shippable.

Backend Developer — Internship
Jun 2023 – Oct 2023

Approved Tech — *Kuwait*

- Completed an intensive 4-month training program covering the full software development lifecycle.
- Delivered production features alongside senior developers in a professional agile team environment.

KEY PROJECTS

Founder & Lead Engineer — Sufra
Apr 2026 – Present

Restaurant Management & POS SaaS — *Palestine*

- Founded and built a complete restaurant management platform end-to-end, from product concept through development and launch.
- Launched a platform now in daily production use by paying restaurant clients, covering POS, kitchen display, table management, digital QR menus, online ordering, inventory, and sales reporting.
- Built an offline-first architecture ensuring zero order loss during connectivity outages, with automatic sync on reconnect — critical for unstable-connectivity environments.
- Designed a secure RBAC system separating restaurant owners, staff, and platform administrators, with full multi-tenant data isolation.

Backend Engineer — BookForMe
Oct 2023 – Present

Booking & E-Commerce SaaS — *Kuwait*

- Joined an established engineering team on a large, live, multi-repository booking platform and reached full productivity with no formal handover.
- Shipped features across bookings, calendars, rescheduling, e-commerce, inventory, staff, and branch management without disrupting existing clients.
- Integrated multi-currency payment gateway processing across 3+ currencies, expanding the platform's reach into multiple markets.
- Maintained full Arabic/English bilingual support (RTL/LTR), ensuring a seamless experience for all users.
- Kept code quality high across a fast-moving team through consistent participation in code reviews.

Backend Engineer — UOP Dashboard
Sep 2025 – Apr 2026

University CMS — *Palestine*

- Modernized a 10-year-old legacy system, cutting operating costs and eliminating performance bottlenecks.
- Redesigned file storage using a polymorphic data model, eliminating duplicate storage by allowing each file to be stored once and reused across the platform.
- Migrated a decade of production data to the new system with zero data loss.
- Automated image optimization (WebP conversion) via background queue jobs, speeding up page loads and lowering infrastructure costs.
- Delivered a major, measurable improvement in speed and running costs across the entire platform.

Backend Engineer — NetSpeed
Jan 2026 – Feb 2026

Internet Service Provider Platform — *Palestine*

- Diagnosed and resolved database bottlenecks causing consistent slowness under heavy user load.
- Introduced Redis caching, reducing database load by ~60% and bringing peak response times below 200ms.
- Redesigned the customer-facing interface to simplify and speed up the most common user tasks.
- Delivered improvements across internet card management, loyalty and rewards, support tickets, and field operations.

Backend Engineer — Taskat
Feb 2025 – Mar 2025

Team Collaboration Platform — *Palestine*

- Built the backend for a combined task board, sprint planning, and team messaging platform.
- Designed a multi-tenant architecture serving multiple teams efficiently under a single shared system, minimizing infrastructure cost.
- Created a flexible, dynamic permissions system allowing each team to define custom roles across multiple projects.

EDUCATION

B.Sc. Information Technology — Web Development
Sep 2020 – Mar 2025

Islamic University of Gaza, Palestine

Focused on advanced web technologies, database management systems, and software engineering principles, building a strong foundation in backend development, OOP, and data structures.
